

when using a project created with Angular CLI 6+ (check via `ng -v`), you'll have an `angular.json` file instead of an `.angular-cli.json` file. In that file, you still need to add Bootstrap to the `styles[]` array as shown in the next video, but the path should be `node_modules/bootstrap/dist/css/bootstrap.min.css`, **NOT** `../node_modules/bootstrap/dist/css/bootstrap.min.css`. The leading `../` must not be included.
