

If the CLI prompts you to **answer some questions** (some versions do that), you can simply hit `ENTER` for all questions. This will accept the default settings which are fine for this course.

The CLI generates a different welcome screen than you're going to see in my video though. No worries, you'll still be able to follow along without issues! Just make sure to code along **so that your code equals mine** - Angular itself didn't change a bit :)

Depending on the CLI version you're using, you might also need to add the `FormsModule` to the `imports[]` array in your `app.module.ts` file (add it if you don't see it there). You might not fully understand what that all means but we're going to cover that in this course, no worries.

If you don't have `FormsModule` in `imports[]` in `AppModule`, please do add it and also add an import at the top of that file: `import { FormsModule } from '@angular/forms';`
